

Good afternoon. **QQQs -1%**, with **SOX -3%** and **Internet +2%** the clear standout. Lots of questions about the continued semi weakness (well, not that many, it is late August after all). No great answers as the AI Semi narrative remains muddled.

下午好。QQQ 指数下跌 1%，其中 SOX 指数下跌 3%，互联网板块上涨 2%，表现最为突出。关于半导体板块持续疲软的问题很多（其实也不算太多，毕竟现在是八月下旬）。目前没有很好的答案，因为 AI 半导体领域的叙事仍然混乱不清。

Here’s how we framed the landscape in our weekly yesterday:

以下是我们昨日周报中对当前格局的概述：

Ok, let’s go through the debate in AI Semi land, where every datapoint now seems to arrive with its own bull and bear interpretation: Anthropic’s ARR bogey miss versus OpenAI’s reacceleration; open source, Grok and Chinese models taking share and narrowing frontier moats versus expanding the total inference pie; collapsing token prices versus demand elasticity; Sam Altman conceding that real-world adoption may move far more slowly than capability; questions around Anthropic potentially being able to price an IPO around a ~\$2T valuation; memory’s 2nd derivative slowing vs. increasingly large buybacks; agents replacing software versus software remaining the cheaper and more reliable abstraction layer; falling H100 prices and cracks in GPU availability versus increasingly large open-source models still requiring GB200/NVL72-class systems; NVDA’s price hikes as a bullish demand signal vs a cost burden on an increasingly debt-funded ecosystem; hyperscaler debt issuance, wider credit spreads and increasingly creative GPU-financing and residual-value backstops; Neoclouds closing the funding gap with hyperscalers vs proving they need NVDA-backed financing to make the math work; Anthropic’s IPO supply hitting the tape and whether it expands the AI-investment universe or simply drains liquidity from the current winners and whether the S-1 and roadshow gives investors confidence in frontier model viability or a much closer look at just how expensive and economically uncertain the model layer remains; Republicans and the public souring on data-center buildouts into the midterms; and, on top of all that, rates, mid-term seasonality, slow drip de-grossing, and the ultimate question of whether lab ARR, token growth and real-world adoption can justify the 2028 capex curve.

好，我们来梳理一下 AI 半导体领域的这场争论。如今，每一个数据点似乎都自带多空两派解读：Anthropic 的 ARR 未达预期，对比 OpenAI 的重新加速；开源模型、Grok 和中国模型抢占份额、收窄前沿护城河，对比推理总盘子的扩大；token 价格崩塌，对比需求弹性；Sam Altman 承认现实世界的采用速度可能远慢于能力提升；围绕 Anthropic 能否以约 2 万亿美元估值定价 IPO 的疑问；内存二阶导数放缓，对比日益庞大的回购规模；智能体取代软件，对比软件仍是更便宜、更可靠的抽象层；H100 价格下跌、GPU 供应出现裂痕，对比日益庞大的开源模型仍需 GB200/NVL72 级系统；英伟达涨价被视为看涨需求信号，对比其对日益依赖债务融资的生态带来的成本负担；超大规模云厂商发债、信用利差走阔，以及越来越有创意的 GPU 融资和残值兜底方案；Neocloud 缩小与超大规模云厂商的资金缺口，对比它们需要英伟达背书的融资才能让账算得过来；Anthropic 的 IPO 供应量开始冲击市场，以及它究竟是扩大了 AI 投资版图，还是仅仅从当前赢家手中抽走流动性；S-1 文件和路演是否让投资者对前沿模型的可行性建立信心，还是让他们更清楚地看到模型层依然多么昂贵且经济前景不确定；共和党人和公众在中期选举前对数据中心建设的态度日趋冷淡；而除此之外，还有利率、中期选举的季节性效应、缓慢的去杠杆化进程，以及最终的核心问题——实验室的年经常性收入（ARR）、代币增长和实际应用采纳能否支撑 2028 年的资本支出曲线。

So, pretty straightforward.

好的，这很简单。

Investor sentiment reflects all of this: bulls are deeply discouraged by the tape and increasingly questioning whether the AI infra trade will ever come back, while bears feel emboldened but still not convinced enough to declare victory. We don’t side with either camp at the moment but still think the vertical go-go days of May and June are gone for good; that was a special time that will live forever in tech investors’ minds, like a beautiful summer romance we’re all slowly realizing may not be coming back.

投资者情绪反映了这一切：多头对盘面深感沮丧，日益质疑 AI 基础设施交易是否还能卷土重来，而空头虽感振奋，却仍不敢轻易宣告胜利。我们目前不偏向任何一方，但仍认为五月和六月的垂直飙升日子已一去不复返；那是一段特殊时光，将永远铭刻在科技投资者的心中，如同一场美丽的夏日恋情，我们都在慢慢而迅速地意识到，它或许不会再回来了。

Sentiment has deteriorated enough to surprise even us, and we can’t help but feel we’re *approaching* a psychological low, especially with NVDA earnings, Jackson Hole, the September tech conference circuit and Anthropic’s S-1 all ahead. Our base case since the “Leopold Low” has been choppy but up, and while the past week certainly hasn’t felt that way, that is still exactly what has happened: nearly every AI infra bucket, outside of HDDs, remains above the low, even as individual names including **NXPI**, **TXN**, **CDNS** and **AVGO** have fallen below it.

市场情绪恶化之深，连我们都感到意外，不禁觉得正接近心理低点，尤其是英伟达财报、杰克逊霍尔会议、九月科技大会密集期以及 Anthropic 的 S-1 文件都即将到来。自“利奥波德低点”以来，我们的基本判断一直是震荡上行，尽管过去一周的走势确实不尽如人意，但实际情况依然如此：除硬盘驱动器外，几乎所有 AI 基础设施板块仍高于低点，即便 NXPI、TXN、CDNS 和 AVGO 等个股已跌破该水平。

So we’ll stick with our choppy-but-upward-trending base case for now (with a lot more confidence on the “choppy” bit) while remaining open-minded as always. In a choppy environment, it pays to buy the low on the ranges, and we’re sitting around there. That said, its late August, liquidity is thin and the narrative is muddled, so we’re not particularly eager or in a rush to make any big trades until the price action gives us some evidence that it’s beginning to firm and the narrative clears up in investor’s minds. Last thing we want is to continue to get chopped.

因此，我们暂时维持“震荡但总体上行”的基本判断（对“震荡”这一部分信心更足），同时一如既往地保持开放心态。在震荡环境中，逢低买入区间低位是有利的，而我们目前正处在这个位置附近。话虽如此，现在已是八月下旬，流动性稀薄，市场叙事也混乱不清，因此我们并不急于或迫切地做出任何重大交易，除非价格走势给出一些证据表明市场开始企稳，且投资者心中的叙事逐渐明朗。我们最不希望的就是继续被震荡所困。

We’re working on some bogeys and the most recent Hot Chip presentation takeaways and will send those out when ready.

我们正在处理一些异常情况以及最新的 Hot Chip 演示要点，准备好后会发送给您。

Really not a ton to call out on why things moved the way they did today (outside of Pelosi buying some BE +1%) so we’ll skip the individual name recap.

今天市场走势背后的原因其实没什么特别值得指出的（除了佩洛西买入了一些 BE，涨了 1% 以上），所以个股回顾部分我们就略过了。
