Electronic Components: Demand Expansion for High Value-Added AI/Data Center Products, Valuation Discipline

We expect the valuation gap between companies relying on opportunistic price increases and those steadily enhancing product competitiveness to become increasingly pronounced.

Key Takeaways

- OW on Murata Mfg: Top Pick. Earnings expansion and utilization rates for high-value-added MLCCs.
- OW on TDK: Earnings expansion for rechargeable batteries and HDD-related products.
- OW on Hirose Electric: Earnings expansion for general industrial machinery/AI server connectors.
- OW on Niterra: Continued earnings growth for plugs, exhaust gas sensors, and SPE electrostatic chucks.
- EW→UW (downgraded on June 17) on Taiyo Yuden: Limited upside from product mix improvement driven by MLCC miniaturization/higher capacitance.

UNDERWEIGHT THESIS

- We expect sales of ABF packages for AI servers to increase and earnings growth to continue.
- We see Ibiden sustaining a competitive advantage in ABF package technology and keeping dominant market share in GPU ABF packages for AI servers.
- We expect earnings growth to continue due to customer and product mix improvement, even though costs increase due mainly to new lines being activated.
- Glass cloth shortages seem likely to continue in F3/27.
- We see a high risk that market consensus will come down and the stock price will fall.

Risk Reward – Niterra (5334.T)

Expect earnings growth in auto components with volume & unit price going up

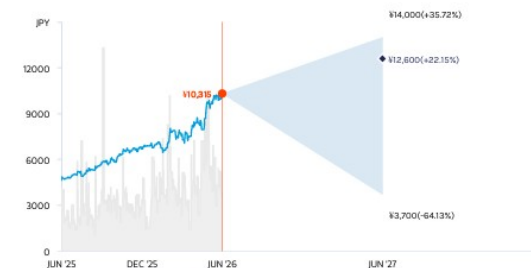

PRICE TARGET ¥12,600

Calculated from our DCF model derived from our base case. Our DCF model assumes a 2.6% risk-free rate, 111 equity beta, and 3.2% risk premium, yielding a 5.7% WACC. We assume a 0% terminal growth rate from F3/36.

Consensus Price Target Distribution

RISK REWARD CHART

OVERWEIGHT THESIS

- We expect the firm to maintain competitiveness in automotive plugs and exhaust gas sensors, and market share to keep gradually expanding.
- Although demand for plugs is unlikely to grow substantially (Niterra boasts the top global share at 47%), we expect Niterra's market share to increase gradually and the firm to book large profits on aftermarket products.
- In automotive exhaust gas oxygen sensors, we expect Niterra to gradually increase its 47% global market share, and earnings to keep growing alongside the tightening of environmental regulations.
- In non-auto business, we believe earnings from electrostatic chucks for SPE will continue growing, having bottomed in F3/24.

BULL CASE ¥14,000

Derived from DCF

Automotive plug & exhaust gas sensor sales exceed the base case by 4% and earnings continue to grow further: This scenario assumes OP of ¥183.7bn in F3/27, ¥202.4bn in F3/28, and ¥293.4bn in F3/31, and uses the same FX & DCF assumptions as the base case. Bull case fair value equates to P/E of 19.9x on F3/27e diluted EPS of ¥704.4, 17.6x on F3/28e diluted EPS of ¥794.9 and 11.6x on F3/31e diluted EPS of ¥1,206.6.

BASE CASE ¥12,600

Derived from DCF

Expect profit to continue to reach new heights, driven by increased sales of automobile plugs and SPE electrostatic chucks: We forecast OP of ¥158.2bn in F3/27, ¥174.4bn in F3/28, and ¥254.4bn in F3/31, assuming FX rates of ¥155/US\$. Our PT is calculated from our DCF model, the conditions for which are outlined in our valuation methodology. Our base case PT equates to P/E of 20.7x on F3/27e diluted EPS of ¥609.6, 18.3x on F3/28e diluted EPS of ¥687.7 and 12.0x on F3/31e diluted EPS of ¥1,049.

BEAR CASE ¥3,700

F3/27e diluted BPS ¥4,036 x P/B 0.9

Lack of growth in autos-related volumes, limited improvement in SPE-related earnings: This scenario assumes OP of ¥113.2bn in F3/27, ¥101.5bn in F3/28, and ¥73.7bn in F3/31, and uses the same FX assumptions as the base case. In this case, the market consensus moves lower and the share price drops to P/B 0.9x.

EQUAL-WEIGHT THESIS

- Earnings should continue to recover, having bottomed in F3/24, but this is mostly priced into the stock.
- We expect earnings growth of Minebea's more-than-60% share of the global market for miniature ball bearings to continue in mid/long term.
- We expect it will be difficult for the Semiconductor & Electronics segment to post a new record high in the near term.
- Access Solution earnings likely to improve thanks to cost cuts and market share gains.

BULL CASE

¥2,300

Derived from DCF

Automotive motor output exceeds our base case by 8% thanks to demand growth and market share gains: This scenario assumes OP of ¥35.0bn in F12/26, ¥37.7bn in F12/27 and ¥47.7bn in F12/30 using the same FX and DCF assumptions as the base case. Our bull case fair value estimate equates to P/E of 18.5x (13.7x excluding net financial assets) on F12/26e diluted EPS of ¥124.3.

BASE CASE

¥1,750

Derived from DCF

Earnings recover gradually due mainly to global auto production recovery: We forecast OP of ¥27.2bn in F12/26, ¥29.9bn in F12/27 and ¥45.2bn in F12/30, assuming an FX rate of ¥155/\$. Our PT is derived from our DCF model, the conditions for which are outlined in our Valuation Methodology. Our PT equates to P/E of 18.3x (11.8x excluding net financial assets) on F12/26e diluted EPS of ¥95.8, 16.3x on F12/27e diluted EPS of ¥107.7 and 11.6x on F12/30e diluted EPS of ¥150.5.

BEAR CASE

¥1,200

End-F12/26e diluted BPS ¥1,379 x P/B 0.9

Profit drops in F12/26 due to rising costs and automobile production decline: This scenario is for OP of ¥23.0bn in F12/26, ¥23.1bn in F12/27 and ¥26.7bn in F12/30, assuming ROE declines to 6.3% in F12/26, remaining above the cost of capital of 5.3%; however, the market consensus has been revised down sharply, and the share price is expected to fall to a P/B of 0.9x, but end-F12/25 net financial assets/share of ¥645 and shareholder returns underpin the share price.

Risk Reward – TDK (6762.T)

We expect LiB profit growth and continued improvement beyond LiB

PRICE TARGET ¥4,900

Derived from the base case. DCF assumptions: risk-free rate 2.6%, equity beta 1.31, risk premium 3.2%, yielding WACC 6.5%. 0% perpetual growth rate from F3/36.

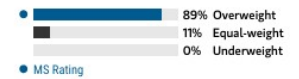

RISK REWARD CHART

OVERWEIGHT THESIS

- We expect Passive Components and Sensor Application earnings to continue to improve after the bottom in F3/25.
- We envision only modest LiB profit growth in F3/27 due to higher cobalt prices, etc., but sustained LiB profit growth in the mid-long term as sales expand in high value-added silicon cathode products and DC BBU batteries.
- HDD head and suspension earnings continue to expand due to increased demand for NL HDD for DC.

Ensuring profitability of DC, server products is key

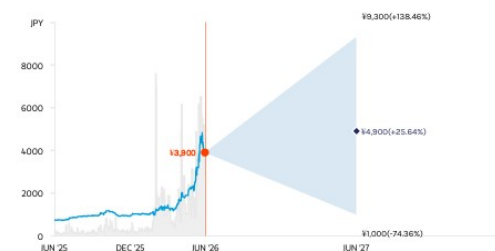

PRICE TARGET ¥4,900

Our price target is ¥4,900, based on a DCF valuation (risk-free rate 2.6%; beta 1.2; risk premium 3.2%; WACC 4.4%); beyond our 3-year base earnings models, we also build forecasts for F3/30–31 into our DCF-based valuation, and our assumptions for F3/32 onward are that the firm maintains FCF/share of ¥350; our price target equates to P/E 40.1x our F3/27e EPS of ¥122.1, and our forex rate assumption for the next quarter and thereafter is ¥155/\$.

EQUAL-WEIGHT THESIS

We forecast an increase in use of photolithography products in industrial machinery and mobility markets. The firm has high global market share for auto products, for which it is increasing personnel for liquid crystal devices. There is also growth potential in optical transceivers and AI server receivers. However, competition is intensifying in the high-margin high-end smartphone field, including for MEMS silicon devices.

EQUAL-WEIGHT THESIS

Our scenario has the firm benefitting from production capacity enhancements undertaken to meet growing demand. We evaluate positively its proactive stance on expanding production capacity for build-up substrates, including those for satellite communications and high-end smartphones. In our view, Meiko's expertise in producing build-up substrates in Vietnam will enable it to benefit from growing demand for high layer/density buildup PCBs, as well as from efforts to move supply chains out of Greater China.

Risk Reward – Hirose Electric (6806.T)

Sales growth to sustain historically high levels while maintaining high margins

PRICE TARGET ¥36,600

Our price target is ¥36,600, based on a DCF valuation (risk-free rate 2.6%; beta 0.9; risk premium 3.2%; WACC 5.1%); beyond our 3-year base earnings models, we also build forecasts for F3/30–31 into our DCF-based valuation, and our assumptions for F3/32 onward are that the firm maintains FCF/share of ¥2,100; our price target equates to 32.8x our F3/27E EPS of ¥1,114.9, and our forex rate assumption for the next quarter and thereafter is ¥155/\$.

OVERWEIGHT THESIS

The equity story is the continued top-line growth across applications through the acquisition of high-margin projects. We like the continued high level of sales growth relative to historical levels, while maintaining a high-profitability structure enabled by its semi-fabless production model. We believe that if the equity market comes to view profit growth as a mid-term trend, there is further upside to valuations.

Risk Reward – Japan Aviation Electronics Industry (6807.T)

Key to profitability recovery is regaining North American smartphone share

PRICE TARGET ¥2,600

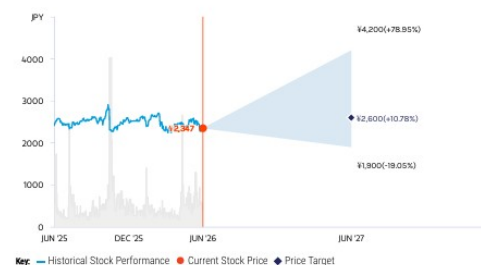

Our price target is ¥2,600, based on a DCF valuation (risk-free rate 2.6%; beta 1.0; risk premium 3.2%; WACC 4.7%); beyond our 3-year base earnings models, we also build forecasts for F3/30–31 into our DCF-based valuation, and our assumptions for F3/32 onward are that the firm maintains FCF/share of ¥125; our price target equates to 26.2x our F3/27E EPS of ¥99.3, and our forex rate assumption for the next quarter and thereafter is ¥155/\$.

EQUAL-WEIGHT THESIS

The equity story centers on margin improvement driven by a recovery in North American smartphone connector share. We expect top-line growth to continue, driven not only by increased sales of wire harnesses for ADAS cameras but also by connectors for BEV chargers and expanded connector sales in India. However, for the stock to rise, we believe profitability must improve through a rebound in North American B-to-B connector market share and expansion of the relatively high-margin aerospace business.

EQUAL-WEIGHT THESIS

Our scenario calls for earnings growth driven by automotive PCBs. We maintain the view that earnings will resume growing after bottoming in F3/26 1H, driven by recovery in production mainly at J-OEM automakers. However, we assign an EW rating as the ramp-up in demand for Japanese Tier-1 suppliers' integrated ECUs appears to be delayed, and the negative impact from sluggish car demand in Europe due to the economic slowdown is likely to persist. That said, the high quality and reliability of CMK's buildup PCBs honed across many years, and its supply system which allows the same boards to be produced globally (including in new facilities in Thailand), continue to be well regarded.

RISK REWARD CHART

EQUAL-WEIGHT THESIS

- Following the completion of customer inventory adjustments, we expect sales to bottom out not only in semiconductor manufacturing and inspection equipment, but also in medical and biotech applications, leading to a recovery in earnings.
- While we expect a recovery from F9/26 following a trough in F9/25, it may take time to exceed the peak OP of ¥57.0bn in F9/22 given higher fixed costs, including depreciation and labor expenses.
- Photonics applications, such as optoelectronic conversion and photonic integration, hold significant potential, including the prospect of yet-to-be-anticipated new products contributing to earnings.

Earnings are expanding driven by growth in MLCC sales, but market expectations appear overly high: OP ¥45.2bn in F3/27, ¥70.2bn in F3/28, ¥100.2bn in F3/31. FX assumption: ¥155/US\$. Base case fair value equates to P/E 55.8x on F3/27e diluted EPS of ¥224.0, 36.7x on F3/28e diluted EPS of ¥340.9, and 25.3x on F3/31e diluted EPS of ¥493.3.

F3/27e diluted BPS ¥2,553 x P/B 2.9

Stays competitive in core products, but slowing end demand drags profits down. OP ¥39.3bn in F3/27, OP ¥58.2bn in F3/28, ¥58.6bn in F3/31. Same FX and DCF assumptions as in the base case. ROE 74% in F3/27, 10.5% in F3/28, higher than cost of capital 6.9%, but with earnings lower than market expectation, P/B falls to 2.9x.

BULL CASE ¥15,500

Derived from DCF

Demand for AI/DC use MLCC is stronger than in the base case. OP assumptions: ¥494.9bn in F3/27, ¥707.0bn in F3/28, ¥1,205.7bn in F3/31. Same FX & DCF model assumptions as the base case. Bull case fair value equates to P/E of 73.1x on F3/27 diluted EPS of ¥212.0, 50.4x on F3/28 diluted EPS of ¥307.4, and 28.4x on F3/31 diluted EPS of ¥546.0.

BASE CASE ¥12,500

Derived from DCF

Earnings continue to grow and beat consensus over the medium/long term due to technological advantages & competitiveness, especially in MLCCs. Assumptions: OP ¥431.9bn in F3/27, ¥624.0bn in F3/28, ¥1,068.9bn in F3/31; FX ¥155/US\$, DCF model (see Valuation Methodology); zero growth from F3/36. Base case fair value equates to P/E 67.4x on F3/27e diluted EPS of ¥185.6, 46.0x on F3/28e diluted EPS of ¥271.9 and 25.8x on F3/31e diluted EPS of ¥484.6.

BEAR CASE ¥3,500

F3/27e BPS ¥1,490 x P/B 2.3

Murata remains competitive, but final demand for its components is lower than we envision. OP assumptions: ¥310.1bn in F3/27, ¥324.3bn in F3/28, ¥379.6bn in F3/31. Same FX assumptions as the base case. Assumes ROE moves from 8.8% in F3/26 to 9.0% in F3/27 and 9.2% in F3/28, higher than our capital cost estimate of 6.1%, but with earnings missing market expectations, P/B drops to 2.3x.

EQUAL-WEIGHT THESIS

The equity story is centered on increased sales of high value-added, high-capacity capacitors and the stable growth of the NECST business. From F3/27, we expect the capacitor business to expand, driven primarily by large-size products for AI servers and film capacitors for xEV applications, while competition in general-purpose products is likely to remain intense amid rivalry with Chinese players. We expect NECST business to deliver stable growth, supported by the wider adoption of residential energy storage systems.

Risk Reward – Nippon Chemi-Con (6997.T)

Near/mid-term targets present high hurdles, risk of dilution too

PRICE TARGET ¥3,500

Our price target is ¥3,500, based on a DCF valuation (risk-free rate 2.6%; beta 1.1; risk premium 3.2%; WACC 4.2%). Beyond our 3-year base earnings models, we also build forecasts for F3/30–31 into our DCF-based valuation, and we assume for F3/32 onward that the firm maintains FCF/share of ¥245. Our price target equates to 41.9x our F3/27e EPS of ¥83.5, and our forex rate assumption for the next quarter and thereafter is ¥155/\$.

RISK REWARD CHART

UNDERWEIGHT THESIS

The equity story is one of earnings expansion fueled by rising sales of AECs for industrial equipment and xEVs. Earnings face a phase of growth on rising demand for value-added capacitors for AI servers/xEV, but we see high hurdles to meeting current MTP targets. Also expect stiffer competition with overseas rivals and MLCs to curb improvement in margins. With planned issuance of C/D-class shares totaling ¥9bn on Jun 29 2026, risk of dilution upon D-class conversion into common shares bears noting too. The C/D-class issuance also comes with a requirement to pay the DBJ as the allottee annual dividends of ¥540mn up to Jun 29 2029 and ¥720mn from Jun 30 2029.

EQUAL-WEIGHT THESIS

The equity story revolves around ongoing negative effects of fixed costs associated with adding to production capacity. We think this is being undertaken amid recognition of the emergence of competing Taiwanese makers in the automotive resistor market. We also think that effects of rising fixed costs alongside investment to boost production will make attaining of earnings targets in the current mid-term plan difficult. In the short term, we also expect the firm to be hit by high prices for precious metals. On the other hand, we expect earnings to head into a mild recovery from F3/28 as demand for value-added products such as shunt resistant devices for AI/data centers is growing.
