Interconnect and Supply Chain Ecosystem

Copper

Advantage in short, intra-rack distance. But expensive signal conditioning for high speeds.

Pluggables

High flexible and agility, but thermal, power, density limit the scalability. Comprehensive supply chain

CPO

Low power consumption, high-density and low latency. But with high initial cost and complexity right now.

More Chips in Physical AI

Global Robot Market, 2026 - 2030

資料來源：各廠商・DIGITIMES整理・2026/8

Summary

Key Takeaways

1

AI efficiency 為核心，會改變產品、半導體、甚至是技術發展路線

2

AI 需求依舊旺盛，帶動半導體市場2027年預計年成長達20.4%
但**供應鏈生態系**更為重要，將決定AI市場的獲利分配

3

市場開始導向**Edge** AI、Physical AI，
雖然依舊偏向高階產品與製程，但會創造更多樣的產品或供應鏈
