Nvidia Shares Down Postmarket With Earnings Call Underway

英伟达股价在财报电话会议期间盘后下跌

- Quarterly data-center sales miss estimates

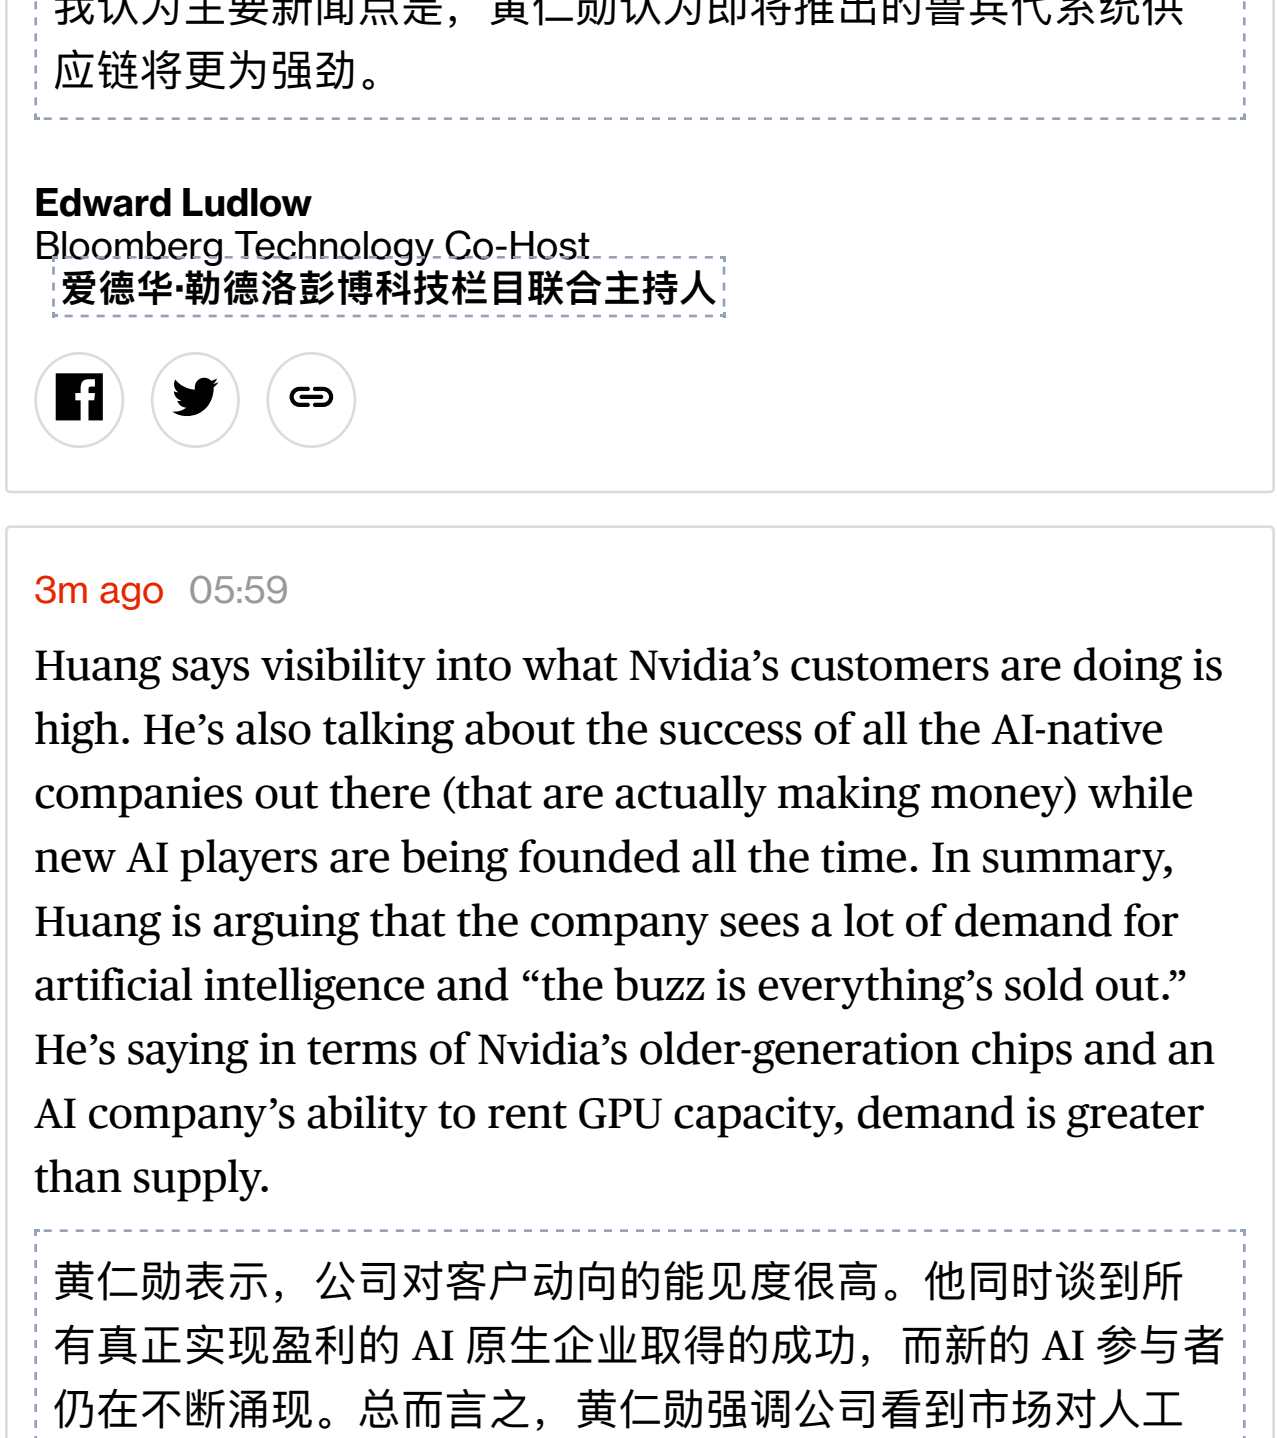

数据中心季度销售额未达预期
- Sees third-quarter revenue of \$54 billion plus or minus 2%

预计第三季度营收 540 亿美元（上下浮动 2%）
- Company adds \$60 billion to share buyback plan

公司将股票回购计划增加 600 亿美元
- H2O sales declined by about \$4 billion

H2O 销售额下降约 40 亿美元
- Shares are down postmarket with call underway

电话会议进行期间股价盘后下跌

Huang is closing with some remarks about what's happened and what's to come.

黄先生正在总结发言，回顾已取得的成就并展望未来。

The main piece of news, I suppose, is that Huang sees a much more robust supply chain for the upcoming Rubin-generation systems.

我认为主要新闻点是，黄仁勋认为即将推出的鲁宾代系统供应链将更为强劲。

Huang says visibility into what Nvidia's customers are doing is high. He's also talking about the success of all the AI-native companies out there (that are actually making money) while new AI players are being founded all the time. In summary, Huang is arguing that the company sees a lot of demand for artificial intelligence and "the buzz is everything's sold out." He's saying in terms of Nvidia's older-generation chips and an AI company's ability to rent GPU capacity, demand is greater than supply.

黄仁勋表示，公司对客户动向的能见度很高。他同时谈到所有真正实现盈利的 AI 原生企业取得的成功，而新的 AI 参与者仍在不断涌现。总而言之，黄仁勋强调公司看到市场对人工智能存在巨大需求，并称"所有产品都销售一空"。他指出，就英伟达旧款芯片和 AI 公司租赁 GPU 算力的能力而言，目前需求远大于供给。

That echoes something CoreWeave's CEO told me a couple of weeks ago. He had argued that even though there are generations of older and obsolete chips from Nvidia, they're finding use and being snapped up.

这与几周前 CoreWeave 首席执行官向我透露的情况相呼应。他曾表示，尽管英伟达存在多代过时的旧款芯片，但这些芯片仍能找到用武之地并被抢购一空。

We are on the final question and it's related to Huang's previous comments about 50% annualized growth for the AI factory business.

现在进入最后一个问题，该问题与黄仁勋先前关于 AI 工厂业务年均增长 50% 的评论相关。

Huang is focusing on the cost reductions and what you get in return for the amount of energy being used to generate a token between generations of chip. For the same amount of energy, the performance of next generation chips will be much much better and this is going to help the end users (the cloud computing companies) have better margins, Huang says.

黄仁勋关注的是成本降低，以及在不同代际芯片之间，生成每个令牌所消耗能量能带来的回报。他表示，在相同能耗下，新一代芯片的性能将显著提升，这将帮助终端用户（云计算公司）获得更高的利润率。

Each generation of chip is better than the last, and that's why they commit to an annual cadence of releasing new chips.

每一代芯片都优于前代，这正是他们承诺每年发布新芯片的原因。

Huang adds that Nvidia is continuing to talk with the administration and is trying to sell the benefits of the world's AI capabilities being built on the "American tech stack" (which has become the term of the year, to be honest).

黄仁勋补充道，英伟达正持续与政府沟通，并努力宣扬全球人工智能能力基于"美国技术栈"构建的优势（说实话，这已成为年度流行术语）。

He also cites the early license approval for H2O sales to specific Chinese entities as a reason for his optimism about that \$50 billion opportunity (noting carefully it is not a sales forecast).

他还提到，H2O 产品已获得向特定中国实体销售的早期许可，这成为他对 500 亿美元市场机遇持乐观态度的原因（并谨慎强调这并非销售预测）。

Huang doesn't really answer the question, though, on how much of that \$4 trillion-by-the-end-of-the-decade market Nvidia will capture.

不过，黄仁勋并未真正回答英伟达能在这十年末达到 4 万亿美元规模的市场中占据多少份额的问题。

He cites the \$600 billion capital expenditure commitment for just this year largely coming from just the top four players in cloud computing. He's arguing that the demand from AI is expanding beyond them but also cites data around how much Nvidia dominates the computer power in a large-scale data center today. Because Nvidia is offering more than just a GPU, he says, it will capture more parts of what goes into that infrastructure.

他列举了仅今年就高达 6000 亿美元的资本支出承诺，主要来自云计算领域前四大巨头。他认为人工智能的需求正在超越这些企业，同时也援引数据说明英伟达当前在大型数据中心算力领域的统治地位。他表示，由于英伟达提供的不仅仅是 GPU，因此将在基础设施的更多环节占据优势。

Huang is arguing that just four hyperscalers have doubled investment to \$600 billion per year. What'll happen when everyone else starts writing big checks? The total can and will be huge, he says, and adds that he does more than just provide chips now.

黄仁勋指出，仅四家超大规模企业就已将年投资额翻倍至 6000 亿美元。当其他企业也开始大举投入时会发生什么？他表示总规模可能且必将十分惊人，并补充说自己现在提供的远不止芯片。

Huang is giving a long answer to a follow-up question on custom silicon solutions. The main gist of his response is that what Nvidia does is incredibly complicated but it's made a number of innovations beyond just GPUs and how computers inside a data center talk to each other.

黄仁勋正在详细回答一个关于定制芯片解决方案的后续问题。他回答的核心要点是，英伟达所从事的工作极其复杂，但公司已实现多项超越 GPU 的创新，并改进了数据中心内部计算机之间的通信方式。

He concludes by calling Nvidia a "holistic full stack solution for AI factories" -- data centers that focus on training or running AI models.

他最后称英伟达是"AI 工厂的全栈整体解决方案"——这些数据中心专注于训练或运行 AI 模型。

Kress says "there is interest" for the H2Os and an initial set of licenses has been received. They do have an initial set of supply, Kress says, and the numbers she gave (\$2 billion to \$5 billion) reflect those factors.

克雷斯顿表示，H2O 芯片已经引起了"市场兴趣"，并已获得首批许可证。她指出公司确实拥有初始供应量，而她给出的数字（20 亿至 50 亿美元）正反映了这些因素。

At the same time, Kress is saying that if interest goes up then Nvidia can respond by boosting the supply of H2O chips available. She still notes there are political and legal hurdles that muddy the outlook.

与此同时，克雷斯顿表示如果需求上升，英伟达可以通过增加 H2O 芯片的供应来应对。她仍指出存在政治和法律障碍使前景不明朗。
