TSMC

Expect strong 3Q26 results, healthy 4Q26 guidance and a faster pace of capacity ramp: Raise PT to NT $3300

Overweight

2330.TW, 2330 TT
Price (29 Sep 26):NT$2475.0

▲**Price Target (Jun-27):NT$3300.0**
Prior (Jun-27):NT$3200.0

Heading into the 3Q26 earnings conference call, we expect TSMC to emphasize: (1) Continued strong demand for leading edge wafers from AI, with tight wafer supply extending into 2028, (2) Stronger efforts for capacity expansion in N3 and N2, (3) Likely pull-in of A14 process node production due to strong progress, (4) Mild upside to 2026 capex, with qualitative indications of strong capex growth into 2027-28, (5) Strong messaging on competitiveness and leading edge market share. We expect 3Q26 revenues and GMs to come in at the high-end of guidance range (JPMe US$45.8bn, up 14% QoQ, GM 66.8%), while 4Q26 revenue growth guidance should reach 11% QoQ, limited by N3 capacity and a lack of further price increases this year. We believe that quantitative guidance on 2027 capex and upside to long-term Datacenter AI growth may need to wait until Jan-27, but TSMC is likely to continue to highlight its accelerated capacity build plans into 2028. We are raising FY27/28 EPS ests by 5%/6% due to stronger N3/N2 demand, slightly better GM outlook and also expect some revenue contribution from A14 in 2H28 due to an accelerated ramp schedule and raise our Jun-27 PT to NT$ 3300 (20x 12m forward EPS). We also now expect TSMC's 2027/28 capex to reach $86/$100bn due to faster ramp of leading edge and CoWoS capacity. Overall, we believe the stock is likely to move up in 4Q26, given stronger downstream (model and application vendors) indications of Compute demand (such as Meta Muse AI).

- **Strong 2H26, still limited by N3 capacity, N3 tightness to worsen in 2027:** We expect TSMC to reach the high-end of 3Q26 revenue guidance range and deliver 11% QoQ growth in 4Q26 revenues, leading FY26 revenues to grow 41% (in USD terms), in line with recent guidance (slightly above 40%). N3 capacity is still quite tight, in our view, and our current estimate is that N3 capacity is likely to be even tighter in 2027 (supply demand gap widening from the ~600k wafers in 2026), despite TSMC bringing on new capacity in Tainan and the US. We expect NVDA to account for 55-60% of N3 wafer shipments in 2027, followed by demand from Google (Broadcom, Mediatek for TPUs and GUC for CPUs), while demand from AWS (Graviton CPUs, Trainium 3 through AWS, Alchip and smaller Fabless vendors) is also likely to remain quite strong. We believe that N3 tightness is only likely to ease in 2028, as more capacity comes online (from JSMC) and accelerator / CPU demand starts to migrate away to N2.
- **Broader price increases and strong leading edge capacity ramp to drive upside in 2027 growth:** With stronger Datacenter AI demand and increased use-cases for Agentic AI (such as Meta Muse AI etc), we expect wafer demand to remain very strong for N5, N3 and N2 in 2027. NVDA, Broadcom, Mediatek, GOOG and AWS are likely to lead the growth in N3 demand, while Apple and AMD are likely to be the primary drivers for N2 demand in 2027. Given strong demand and tight supply, we continue to expect a broader price increase for TSMC's wafers in 2027, with leading edge (N3, N2) likely to rise ~10%, while mature process nodes (N7 and above) also seeing a low-mid single digit price increase (first price increase for mature nodes in this

Summary Investment Thesis and Valuation

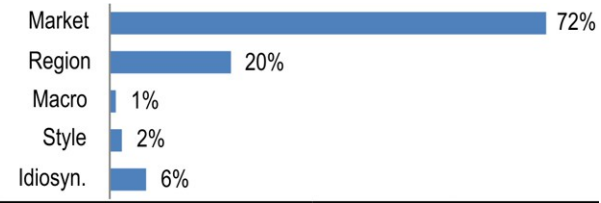

Investment Thesis

We are OW on TSMC, given continued strong leading edge wafer demand from AI, along with stronger efforts for capacity expansion in N3, N2, as well as an earlier ramp of A14. We expect A14 to go into mass production in 1H28, which could generate some revenue in 2H28. We believe the tight leading edge wafer supply will extend into 2027-28 and expect TSMC to continue its accelerated capacity build plans into 2028. We expect GMs to stay at mid-high 60% range due to continued N2 dilution balanced by strong N3 demand, price hikes in 1H27, and continued cross-Fab collaboration. We believe that GMs have a chance to approach 70% levels once N2 dilution becomes modest (likely in late 2027 or early 2028). We believe TSMC's leading industry position is intact with its leading-edge process technology remaining ahead of its peers and its mature nodes continuing to grow with a focus on high value segments.

Valuation

Our Jun-27 PT of NT$3,300 is based on ~20x 12-month forward P/E and reflects strong revenue growth from stronger AI demand and faster capacity growth. Our target multiple is higher than TSMC's five-year average historical multiple.

upcycle). With increased contribution from HPC focused N3 (20-25% price premium vs. mobile) and rapid ramp of N2, we expect blended ASPs to rise 25% in 2027, faster than the 2026 price increase. We now model TSMC revenue to grow 39% in 2027, 4ppts higher than prior expectations.

- **Strong growth is likely to continue into 2028 given continued compute demand and strong N2 ramp indicators:** We now have more confidence in growth into 2028, with strong demand indicators for continued compute demand (strong accelerator roadmap and aggressive ramp of several CPU projects, along with strong interconnect demand). N2 is likely to be the primary driver for 2028 growth, with capacity ramping up to 210k wfpm by end 2028, with demand driven by flagship accelerator projects (NVDA Feynman on A16, AMD MI500 on N2, TPUv9 and Trainium 4 in N2, along with incremental contributions from new programs such as OpenAI Serrano and MTIA 600) and continued demand growth from Datacenter CPUs (strong growth from AMD Venice and follow-on projects, NVDA Rosa migrating to N2, GOOG Axion 3, Graviton 6 all migrating to N2 and new CPU projects ramping up from Meta and Microsoft). N3 tightness is likely to ease materially, but follow-on demand for N3 is likely to be driven by networking, HBM base dies and memory controllers. We do expect some conversion of N3 capacity to N2 in the 2028-29 timeframe, with fungibility likely to remain especially high in TSMC's US and Japan capacity. Given the strong N2 ramp and steady N3 demand, we believe that TSMC revenues could grow ~30% in 2028.
- **Raising capex further to support aggressive N3, N2 and A14 ramp:** We are raising our capex expectations to $64/$86/$100bn in 2026/27/28 to reflect stronger capacity ramp in N3 and N2, as well as an earlier ramp of A14. We expect N3 capacity to now reach 250k wfpm at peak levels by the end of 2028, to support strong demand through 2027 and address the meaningful capacity ramp. Even after the accelerators move away to N2 in 2028, N3 demand is still likely to be supported by HBM base dies, networking and interconnect, and SSD controller demand in 2028. We expect N2 ramp to be faster, as TSMC is aiming to ensure that the demand-supply gap that it is experiencing in N3 (in 2026-27) can be minimized when it comes to the N2 ramp, which should also help to limit competitive pressure. Yield ramp for N2 appears to be progressing quite well (for both Apple A20 Pro and AMD Venice / MI450) in 2H26 and should help drive a stronger ramp from 2H27 onwards as multiple AI accelerator and CPU projects adopt N2/ A16 process nodes. We now expect N2 capacity to reach 118k/210k wfpm by end 27/end 28, with some capacity in 2H28 being allocated for A16 (primarily for NVDA Feynman). Based on our current checks, we also expect a slightly earlier A14 ramp, with some high volume production coming through in 2H28. We also believe recent press articles (link) regarding a second US Fab cluster in Texas have some credibility, since it appears to be in the final discussion stage, and could happen beyond 2030, with much of the US ramp until 2030 concentrated in Arizona.
- **Seeing the potential for earlier A14 ramp in 2028, given strong initial yield progress:** TSMC has indicated that A14 process node would enter mass production in 2028, which typically indicates revenue generation in 2029 (similar to N3 and N2 pattern). However, our recent checks suggest that A14 ramp could be pulled in by two-three quarters, with risk production in 1H27 and potential mass production ramp in 1H28, which could generate some revenue in 2H28. Yield progress for A14 seems to be ahead of schedule with SRAM and device yield already reaching 90+%, supporting quicker progress to pilot production. We believe that the early ramp of A14 will happen in Fab 20 (in Hsinchu), with further production ramp happening in Taichung (new Fab 25) and potentially some later phases in Kaohsiung (Fab 22). Some supply chain checks indicate that Apple's iPhone Pro processors could move to A14 as early as 2H28, but we believe this could be too aggressive at this point – we currently model ~$1.8bn A14 revenue in 2H28, but feel risk is biased higher, given strong intent to provide separate pathways for smartphone and HPC/AI leading edge customers in 2028.

Gokul Hariharan AC
(852) 2800-8564
gokul.hariharan@jpmorgan.com

- **Strong N2 ramp and A14 pull-in indicate continued competitive edge in leading edge process; back-end competition increasing for 2.5D solutions:** TSMC's strong N2 pipeline and early ramp of A14 process node suggests that its competitive edge is likely to remain largely intact vs. Intel and Samsung Foundry, in the next 2-3 years. We benchmark Intel's 18A as somewhat equivalent to TSMC N3E, while its 14A (ramping in late 2028) is likely to be equivalent to TSMC's N2 or N2P (ramping in 2027) and well behind A14 (ramping in 2028). We do expect some market share for Intel and Samsung Foundry given the extreme tightness in leading edge nodes, but these are likely to be restricted to non-critical projects (ADAS, some Smart NICs, smaller volume networking and CPU projects, potentially low-end Apple projects and HBM base dies), and are likely to ramp only if TSMC's capacity remains extremely tight in 2028 and beyond, but TSMC's market share is likely to stay at 95+% for N2 process node. TSMC's recent aggressive capex stance is also aimed to narrow the supply demand gap in 2028 and beyond, in our view. On packaging, given shorter lead-times and more diverse offerings, we do see some more competition from Intel EMIB-T. Intel EMIB-T represents a viable option for large reticle size packages at a lower cost, even though substrate yields are still a limiting factor for very wide adoption. However, 2.5D packaging is now already well-established and is starting to be outsourced to OSATs. The next technology evolution is 3D packaging and CPO – which are both essential for lower latency and higher interconnect speeds within packages and AI systems. We believe TSMC's 3DSoIC and COUPE platforms are likely to become the industry standards for 3D packaging and CPO respectively, similar to how CoWoS emerged as the industry standard for 2.5D packaging. Multiple accelerators and CPUs (NVDA, AMD, Apple, OpenAI, MTIA) are already embracing 3DSoIC for their next generation packaging while CPO platforms (NVDA Spectrum X, Broadcom, start-ups such as Ayarlabs and Lightmatter) are all working to ramp COUPE as their primary CPO platform in the next 2 years.
- **Gross Margins likely to stay at mid-high 60% range in the next few quarters; 70% still doable once N2 dilution settles down:** Given the increasing N2 dilution and drag from overseas Fab ramp, we expect TSMC's GMs to stay in the mid-high 60% range in the next few quarters. In addition, the stronger TWD is also likely to be a mild drag to GMs in 2H26. Looking into 2027, we expect GMs to stay in the high 60% range, with the continued N2 ramp-related dilution balanced by continued strong N3 demand, price hikes kicking in from 1Q27 and continued cross-Fab collaboration. As N2 dilution starts to become more modest (likely in late 2027 or early 2028), we believe that GMs have a chance to approach 70% levels, especially since demand remains quite strong.
- **JPM view on 3Q26 results and 4Q26E guidance expectations:** We expect 3Q26 revenue to reach the high end of the guidance (JPMe US$45.8bn, up 14% QoQ vs company guidance US$44.6-45.8bn, up 12% QoQ at midpoint), with GMs also expected at the high end (JPMe 66.8% vs. guided 65–67%). The strong performance is mainly driven by higher leading edge UTR and price hikes. For 4Q26, we expect TSMC to guide to 10-12% QoQ revenue growth in USD terms (JPMe 11%), leading FY26 revenues to grow 41% YoY (in USD terms), in line with recent guidance (slightly above 40%). GM guidance is expected to be in the mid-high 60% range (likely 65.5%-67.5%, JPMe 66.8%) due mainly to N2 dilution and drag from overseas Fab ramp. We raise our FY26 capex to $64bn (company guidance $60-64bn) and expect TSMC to continue highlighting its accelerated capacity build plans into 2028 in the upcoming earnings call.

J.P.Morgan

Stronger 2027 ramp led by N3 and N2

TSMC appears keen to accelerate its N3 and N2 capacity build-out, supported by strong demand from HPC customers. We expect TSMC's N3/N2 capacity to reach ~220K/120K wfpm in 2027, up from ~180K/60K in 2026.

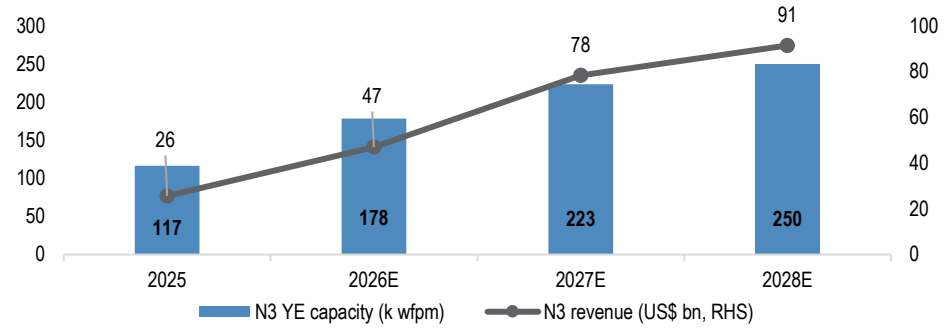

Despite incremental N3 capacity coming online in Tainan and the U.S., we expect N3 to remain tight in 2027, as most key AI accelerators will be on N3 that year (e.g., NVIDIA Rubin/Rubin Ultra, Google TPU v8t/v8i, and AWS Trainium 3), driving a meaningful step-up in N3 demand.

For N2, we expect the initial ramp to be driven largely by smartphone SoCs (Apple A20/A20 Pro, flagship SoCs from MediaTek and Qualcomm) and AMD's Venice and MI450 in 2H26, with additional N2 demand from NVIDIA, Google, and AWS likely coming from 2H27.

Overall, given the N3 and N2 capacity ramp and a ~25% blended ASP increase, we now model 39% revenue growth (USD) in 2027, revising up from 35% previously.

Figure 2: TSMC N3 YE capacity build and revenues

Strong growth is likely to continue into 2028 due to faster N2 ramp

Gokul Hariharan AC
(852) 2800-8564
gokul.hariharan@jpmorgan.com

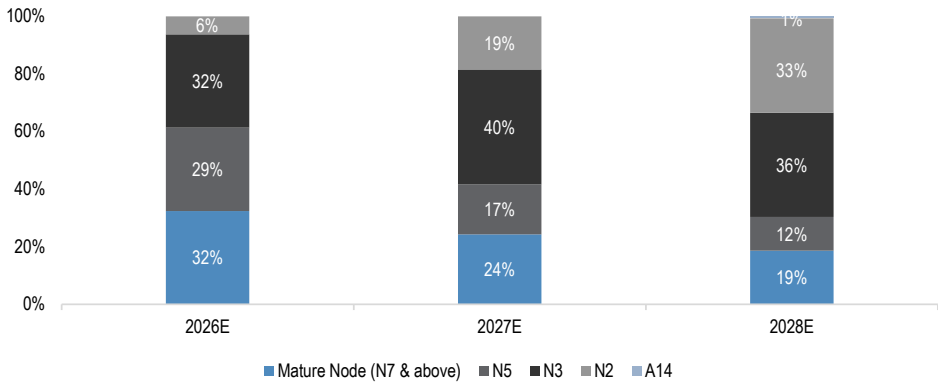

We now expect TSMC's N2 capacity to reach 210K wfpm in 2028, up from our prior estimate of 177K wfpm. The faster N2 ramp reflects TSMC's ongoing efforts to encourage HPC customers to shift to N2 and aims to minimize the demand-supply gap experienced at N3 in 2026–27—which should also limit competitive pressure (we believe TSMC's market share is likely to stay at 95%+ for the N2 node)—with 9 fab phases coming online over the next 3 years (1–2 phases in Fab 20, 5+ phases in Fab 22, and 1 phase in AZ P3).

We believe the strong ramp is largely supported by a robust N2 project pipeline, including flagship accelerator programs (NVIDIA Feynman on A16, AMD MI500 on N2, and TPU v9 and Trainium 4 on N2, along with incremental contributions from new programs such as OpenAI Serrano and MTIA 600), as well as continued demand growth from datacenter CPUs (strong growth from AMD Venice and follow-on projects, NVIDIA Rosa migrating to N2, and Google Axion 3 and Graviton 6 all migrating to N2, alongside new CPU projects ramping up from Meta and Microsoft).

Given this strong ramp, we believe N2 is likely to be the primary growth driver in 2028, accounting for 30%+ of total wafer revenue in 2028, up from ~20% in 2027.

Figure 4: TSMC revenue by process node

%

Source: J.P. Morgan. Company reports.

Price hikes more broad-based in 2027; strong belended ASP increase led by rising N2 mix

We expect TSMC's blended ASPs to grow 17% in 2026, driven by (1) N3 mix enrichment as HPC customers become the majority at that node; (2) a 6–10% price hike for advanced nodes (N5 and below) in early 2026; and (3) higher ASPs from expedited wafers (hot/super-hot runs carrying 50%/100% price premiums).

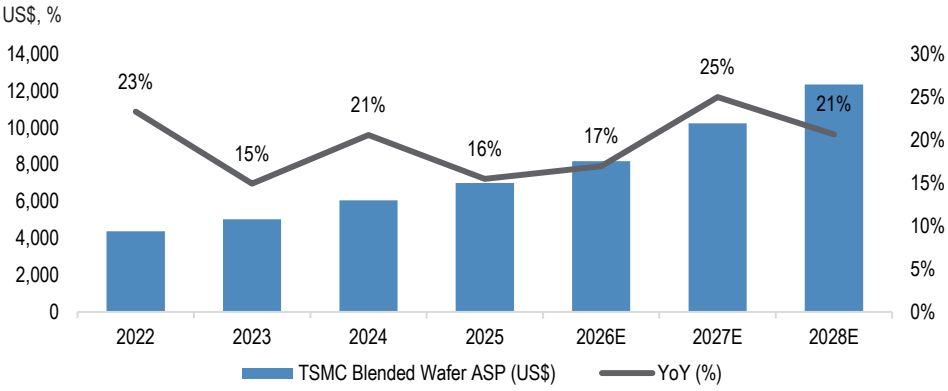

Looking into 2027, we still expect a broader price increase across TSMC's wafers, with a ~10% price hike for leading edge (N3, N2), milder increases for N5/N7 and CoWoS, and a long-awaited low- to mid-single-digit price increase for mature nodes (N7 and above)—the first price hike in this AI-driven semis upcycle. We believe customers are likely to agree to multi-year price contracts given ongoing capacity tightness.

Gokul Hariharan AC
(852) 2800-8564
gokul.hariharan@jpmorgan.com

Blended ASPs should also be supported by a higher mix of N2 and N3 at higher ASPs (~60% of wafer sales from N2 and N3 in 2027 versus ~40% in 2026) and by more N3 capacity skewing toward HPC (with a 20–25% price premium versus mobile, due to more metal layers and complexity).

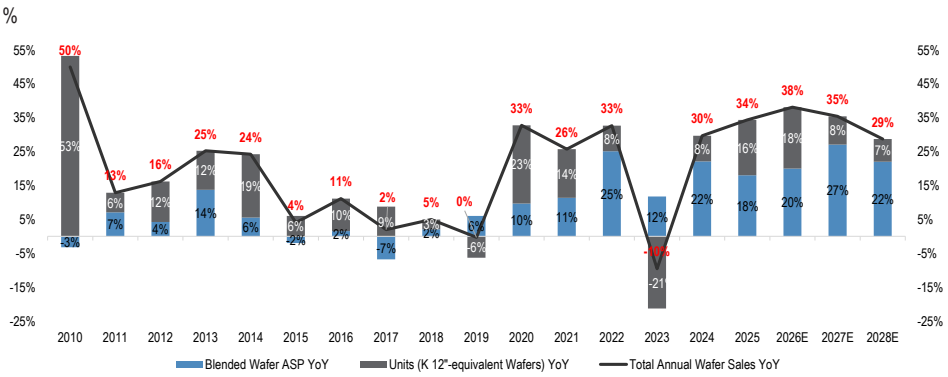

As a result, we expect TSMC's blended ASPs to grow 25% YoY in 2027, helping GMs stay in the mid-to-high 60% range over the next few quarters.

Figure 5: TSMC Blended Wafer ASP growth

Source: J.P. Morgan estimates, Company data.

Raising capex further to support aggressive N3, N2 and A14 ramp

We are raising our capex expectations to $64/$86/$100bn in 2026/27/28 (up from the previous $62/$81/$90bn) to reflect a stronger capacity ramp in N3 and N2, as well as an earlier ramp of A14.

Gokul Hariharan AC
(852) 2800-8564
gokul.hariharan@jpmorgan.com

Figure 7: TSMC capex trend

US$bn / %

Source: Company data, J.P. Morgan estimates.

We expect N3 capacity to reach 250k wfpm at peak levels by the end of 2028 (up from 178k by end 2026), to support strong demand through 2027. For 2028, while major AI accelerators will be migrating to N2 in 2028, N3 demand is still likely to be supported by HBM base dies, networking and interconnect, and SSD controller demands.

We expect the N2 ramp to be faster, as TSMC aims to minimize the demand-supply gap it experienced with N3 in 2026–27 when ramping N2, which should also help limit competitive pressure. The N2 yield ramp appears to be progressing well in 2H26, for both Apple A20 Pro and AMD Venice/MI450. We expect a stronger ramp from 2H27 onward, as multiple AI accelerator and CPU projects adopt N2/A16 process nodes, including TPU v9 and Trainium 4. We now expect N2 capacity to reach 118k/210k wfpm by end-2027/end-2028, driven by nine fab phases coming online over three years, including Fab 20, Fab 22, and Arizona Phase 3. Meanwhile, some capacity in 2H28 is expected to be allocated to A16, primarily for NVDA Feynman. We also expect a slightly earlier A14 ramp, with some high-volume production coming through in 2H28 based on our latest checks. Lastly, recent press articles (link) suggesting a second US Fab cluster being considered in Texas sound credible, in our view, with TSMC likely in the final stages of decision making. Initial U.S. capacity ramp (until 2029-30) is still likely to be in Arizona, with any new capacity in Texas coming in 2030 and beyond.

Table 1: TSMC Fab expansion plans

Fab	Node	Timeline
Tainan (Fab 18 P9)	N3	1H27
Tainan (likely Fab 18 P10-P12)	N2 and A16 likely	Pending land approval
Kaohsiung (Fab 22 P1-P5)	N2	2027-29
Kaohsiung (Fab 22 P6-P8)	A16	2028 and beyond
Baoshan (Fab 20 P1-P4)	N2 / A16 + R&D	2025 onwards, with further expansion in 2027-28
Taichung (Fab 25 - P1-P8/P9)	A14 / A10	2028 and beyond
US AZ (Fab 21 P2)	N3	2H27
US AZ (Fab 21 P3)	N2 / A16	Late 2028 - 1H29
Japan Kumamoto (Fab 23 P2)	N3	2H28

Potential earlier A14 ramp in 2028, given strong initial yield progress; continued 95+% market share in N2 and beyond

Our recent checks suggest that A14 ramp could be pulled in by 2-3 quarters. We now believe A14 risk production could take place in 1H27 and potential mass production ramp in 1H28, which could generate some revenue in 2H28, ahead of what the company previously indicated (MP in 2028, with the general market assumption for revenue contribution in 2029).

Yield progress for A14 seems to be ahead of schedule with SRAM and device yield already reaching 90+%, which suggests quicker progress to pilot production. Some supply chain checks indicate that Apple's iPhone Pro processors could move to A14 in 2H28, but we believe this could be too aggressive – we currently model ~$1.8bn A14 revenue in 2H28. We believe that early ramp of A14 will happen in Fab 20 (in Hsinchu), with further production ramp happening in Taichung (new Fab 25) and potentially some later phases in Kaohsiung (Fab 22). TSMC appears to be attempting to segment HPC demand (N2 and A16) and smartphone demand (potentially some A14 for Apple) into two nodes in 2028, which could avoid the current capacity tightness that we are witnessing in N3 (all leading edge products being on N3 in 1H26).

Figure 8: TSMC revenue from N3, N2 and A14 in the first 3 years

Source: J.P. Morgan estimates, Company data.

TSMC's strong N2 pipeline and earlier ramp of A14 process node suggests that its competitive edge is likely to remain largely intact vs Intel and Samsung Foundry, in the next 2-3 years. We benchmark Intel Foundry's 18A as somewhat equivalent to TSMC N3E, while its 14A (ramping in late 2028) is likely to be equivalent to TSMC N2 or N2P (ramping in 2027) and well behind A14 (ramping in 2028). By the time of Intel 14A ramp, TSMC's N2 family will already reach US$50-60bn revenue scale.

Table 2: TSMC vs. Intel Leading Edge Capacity

k wfpm

Foundry/Node (k wfpm)	2025	2026E	2027E	2028E
Intel 18A	-	30	55-60	80k for 18A + 14A
TSMC N3+N2	133	238	342	460
TSMC N5+N3+N2	277	362	462	580

Capacity is as of year end

gokul.hariharan@jpmorgan.com

While we do expect some market share for Intel and Samsung Foundry given the extreme tightness in leading edge nodes, these are likely to be restricted to non-critical projects (ADAS, some Smart NICs, potentially low-end Apple projects and HBM base dies), and are likely to ramp only if TSMC's capacity remains extremely tight in 2028 and beyond. However, TSMC's market share is likely to stay at 95+% for the N2 process node. TSMC's recent aggressive capex stance is also aimed to narrow the supply demand gap in 2028 and beyond.

On packaging, given shorter lead-time and more diverse offerings, we do see some more competition from Intel EMIB-T. Intel EMIB-T represents a viable option for large reticle size packages (up to 10-12x reticle size) at a lower cost, even though substrate yields (55-60%, based on our checks) are still a limiting factor for very wide adoption. However, 2.5D packaging is now already well-established and is starting to be outsourced to OSATs, with non-TSMC proprotion forecasted to reach 23%/30% of total CoWoS/CoWoS-like capacity by end 2027/28.

The next technology evolution is 3D packaging and CPO – which are both essential for lower latency and higher interconnect speeds within packages and AI systems. We believe TSMC's 3DSoIC and COUPE platforms are likely to be the industry standards for 3D packaging and CPO respectively, similar to how CoWoS emerged as the industry standard for 2.5D packaging. Multiple accelerators and CPUs (NVDA, AMD, Apple, OpenAI, MTIA) are already embracing 3DSoIC for their next generation packaging while CPO platforms (NVDA Spectrum X, Broadcom, startups such as Ayarlabs, Lightmatter etc.) are all working to ramp COUPE as their primary CPO platform in the next 2 years.

Investment Thesis, Valuation and Risks

TSMC *(Overweight; Price Target: NT$3300.0)*

Investment Thesis
We are OW on TSMC, given continued strong leading edge wafer demand from AI, along with stronger efforts for capacity expansion in N3, N2, as well as an earlier ramp of A14. We expect A14 to go into mass production in 1H28, which could generate some revenue in 2H28. We believe the tight leading edge wafer supply will extend into 2027-28 and expect TSMC to continue its accelerated capacity build plans into 2028. We expect GMs to stay at mid-high 60% range due to continued N2 dilution balanced by strong N3 demand, price hikes in 1H27, and continued cross-Fab collaboration. We believe that GMs have a chance to approach 70% levels once N2 dilution becomes modest (likely in late 2027 or early 2028). We believe TSMC's leading industry position is intact with its leading-edge process technology remaining ahead of its peers and its mature nodes continuing to grow with a focus on high value segments.

Valuation
Our Jun-27 PT of NT$3,300 is based on ~20x 12-month forward P/E and reflects strong revenue growth from stronger AI demand and faster capacity growth. Our target multiple is higher than TSMC's five-year average historical multiple.

Risks to Rating and Price Target
Key downside risks to our rating and price target include: (1) the debate on the duration of the AI capex growth cycle and (2) any negative impact from weak PC/Smartphone demand in 2H26.

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

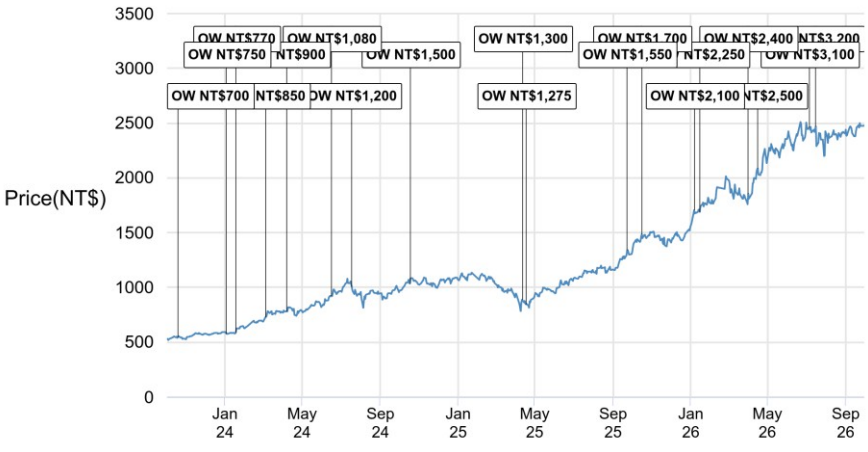

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to TSMC or related entities.
- **Analyst Position:** An analyst on the Equity or Credit coverage team, non-fundamental analyst who may produce trade recommendations, or a member of their respective household(s) has a financial interest in the debt or equity securities of TSMC or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: TSMC or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: TSMC or related entities.
- **Client/Non-Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-securities-related: TSMC or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from TSMC or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from TSMC or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of TSMC or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period. J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

Coverage Universe: Hariharan, Gokul : ASE Technology Holding Co Ltd (3711.TW), ASMPT Ltd (0522) (0522.HK), AirTAC (1590.TW), Alchip Technologies (3661.TW), Chipbond Technology (6147.TWO), GDS Holdings (GDS), GUC (3443.TW), Hiwin (2049.TW), Hon Hai Precision (2317.TW), MediaTek Inc. (2454.TW), Nien Made (8464.TW), Novatek Microelectronics Corp. (3034.TW), Powerchip Semiconductor Manufacturing Corp. (6770.TWO), SMIC (0981) (0981.HK), Silicon Motion (SIMO), Sinbon (3023.TW), TSMC (2330.TW), Teco Electric & Machinery (1504.TW), UMC (2303.TW), Vanguard International Semiconductor Corp. (5347.TWO), Voltronic Power Technology (6409.TW), Xiaomi (1810) (1810.HK)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss

arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
